

Point-of-Sale for HME

QS/1[®]'s Point-of-Sale system helps you manage your store's HME inventory and retail sales with greater profitability. Use point-of-sale to handle all cash, check, debit and bank card transactions. Point-of-sale can pay for itself by reducing losses due to cashier errors and sweetheart checking. And because it integrates with your SystemOne[®] software, there's no entering data into a separate system.

Enhance Retail Profitability

Manage your front-end cash sales like you already manage your insurance and billing with SystemOne. Use the system to identify and track trends, fast and slow-moving items, and seasonal sales to maximize profitability.

Return on Investment

With its careful attention to profitability and loss management, point-of-sale can actually pay for itself. Prices are updated from your SystemOne item file to reduce possible pricing errors.

Speed Checkout

Make customer checkout fast, easy and flexible for staff and customers. Validate and process a variety of payment methods for greater convenience. Scan GTIN (formerly UPC) bar codes for more accurate inventory management and quicker checkout.

System Integration

Point-of-sale integrates seamlessly with SystemOne and its HME Inventory Management and Accounts Receivables modules for enhanced efficiency.

Training and Support

QS/1 can schedule training to meet your needs, even at nights or on the weekend. SystemOne software support specialists are only a toll-free call away.

- Offer customers fast and easy checkout plus a wide variety of payment options
- Control access with multi-level security options
- Eliminate losses due to cashier errors and sweetheart checking
- Scan item bar codes for fast and accurate checkout
- Process cash, check, credit and debit cards all without a separate card processing system
- Set check acceptance parameters and maintain a bad-check file
- Set limits on individual check cashing, voids and refunds
- Export data to your favorite off-the-shelf business software for manipulation and reports
- Track employee hours with integrated time clock.
- Enjoy comprehensive control by integrating Point-of-Sale for HME with HME Inventory Management and HME Accounts Receivable modules
